Gabon: Introduction

Chart 1: Political map of Gabon

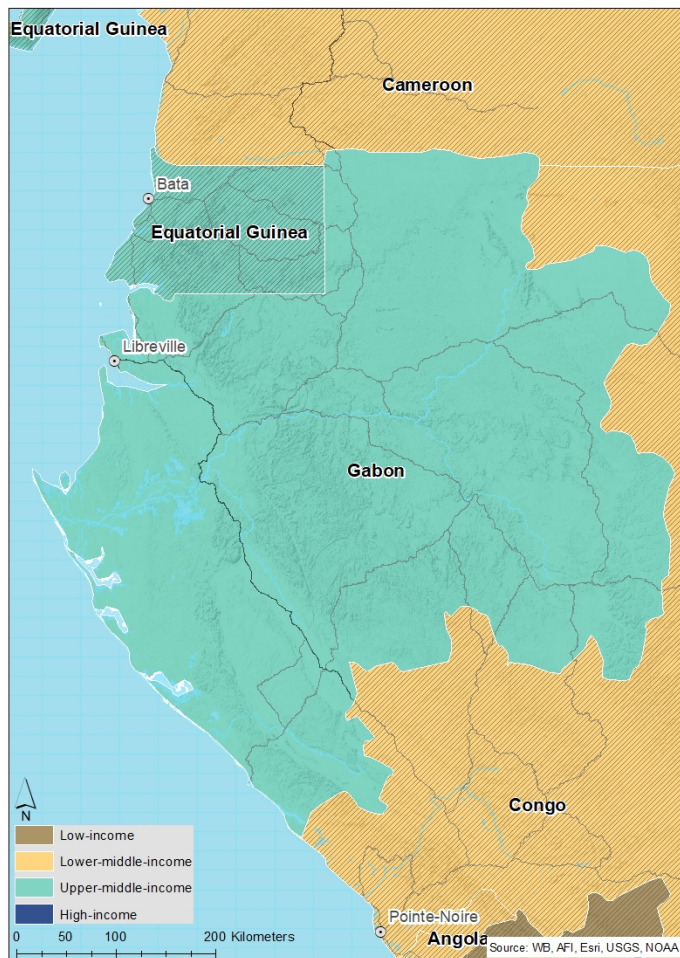

Chart 1 is a political map of Gabon.

Gabon is an upper-middle-income country rich in natural resources that lies on the equator, along the west coast of Central Africa. The country covers an area of about 270 000 km² with an estimated population of 2.5 million people in 2023. Gabon is bordered by Equatorial Guinea and Cameroon to the north, the Republic of the Congo to the east and south, and the Gulf of Guinea to the west. The islands of São Tomé and Príncipe are situated off the coast.

Gabon has a tropical climate, with year-round high temperatures and humidity. **Precipitation** is abundant and spread almost throughout the year, typically ranging from 1 500 mm to 3 500 mm per year. The country has a single wet season between October and May, with a mean monthly rainfall of 200–250 mm. Gabon's **natural resource wealth** includes timber, manganese, natural gas and crude oil. Forests cover 85% of the country's landmass, making it the second-largest forest area in Africa. There are four ecoregions: the Atlantic Equatorial Coastal forest, Central African mangroves, the Gulf of Guinea central region and the northwestern Congolian lowland forest. Gabon's capital and largest city is Libreville located along the Atlantic coast in the northwest. The official language is French, and the currency in use is the Central African CFA franc.

The Kingdom of Orungu was formed in Gabon by the 18th century and became a powerful trading centre, mainly due to the slave trade. Since its **independence** from France in 1960, the sovereign state of Gabon has had four presidents. Elected

in 1961, the first president, Léon Mba, was overthrown by a coup d'état in 1964 before being restored to power by France. In 1967, judged unfit to govern, he was replaced by Omar Bongo.

Despite the introduction of a multi-party system in the early 1990s, the organisation of elections and a new democratic constitution, Omar Bongo and his Parti Démocratique Gabonais (PDG) kept firm control over Gabon. At his death, the son, Ali Bongo, succeeded him as head of the country in 2009. In September 2023, after a contested election, the long reign of the Bongo family at the head of Gabon was interrupted by a coup d'état, setting up a transition government led by Brice Oligui Nguema, former head of the presidential guard.

Since the beginning of the transition, a national dialogue has been organised to rebuild institutions, lay the foundations for a new constitution, and set the framework for the 2025 presidential and legislative elections. The latter are due to take place on **12 April 2025**, earlier than initially planned. The draft constitution was adopted by a popular **referendum** in November 2024. The constitutional revisions address dynastic rule by setting presidential term limits and banning family members of a sitting president from running for office. However, despite these advances, questions remain regarding the nature of the transition and its potential to deliver a definitive shift toward civilian rule in 2025. The president of the transition officially announced his intention not to run in the next elections, and this could pave the way for more open competition.

Although the military takeover enjoyed popular support locally, it was condemned by both the **Economic Community of Central African States** (ECCAS) and the **African Union** (AU) as a violation of the principles of both institutions. As a result, Gabon was suspended from both, before being reinstated by ECCAS in March 2024.

In December 2024, **ECCAS** announced that it would maintain Gabon's suspension until constitutional order was restored. At the same time, the bloc sent a positive signal by referring to the "peaceful and inclusive" nature of the coup and by reversing its decision to move its headquarters to Malabo.

Abundant petroleum reserves and foreign direct investment in the oil sector turned Gabon into one of the most prosperous countries in sub-Saharan Africa in terms of GDP per capita.

Gabon's **oil industry** started gaining attention even before independence. In 1931, several oil deposits were discovered in regions neighbouring the capital Libreville. In 1975, Gabon became a full member of the Organization of Petroleum Exporting Countries (OPEC). The country withdrew its membership in 1995 but rejoined the organisation in 2016. In 2021, Gabon also rejoined the Extractives Industries Transparency Initiative (EITI), from which it was **not suspended** despite the military coup.

Gabon is Africa's **seventh-largest oil producer** and a net oil exporter although it only plays a minor role in global oil markets. In 2023, **Gabon's share** of OPEC members' crude oil exports stood at 1.04%, the second lowest after Equatorial Guinea.

Crude **oil production** in Gabon averaged 233.1 barrels per day (bpd) from 1973 until 2024. According to **OPEC data**, in 2023 it stood at 223 bpd. Due to the natural depletion of mature oil fields, the transition government is developing its offshore, deep-water resources to achieve a target of doubling oil production to 500 000 bpd by 2025. Offshore resources account for more than 70% of Gabon's about 2 billion barrels of proven reserves, and recent **offshore oil discoveries** are expected to fuel production growth in the country.

In addition to the oil industry, Gabon possesses abundant primary materials and has potential for agricultural growth, developing the fishing industry and tourism sector development. Other notable **exports** aside from crude petroleum include manganese ore, sawn wood, veneer sheets and refined petroleum.

Gabon is currently classified as an upper-middle-income country by the [World Bank](#). However, as is the case with several of its oil-producing peers, its resource wealth has not translated into inclusive growth and sustainable development for its population. Therefore, on many development indicators it is not aligned with the average of its income peer group. In the absence of economic diversification and inclusive economic governance, many [development challenges](#) persist. About one-third of the population still lives in poverty, inequality is entrenched and the dependence on food imports is growing. The economy is vulnerable to external shocks, and economic growth has yet to lead to sustainable job creation. Unemployment is high, in particular among young people, a problem that is compounded by the high level of informality. Moreover, infrastructure gaps, governance challenges and an unattractive business environment [hold the country back](#).

Beyond guiding the return to civilian rule, the transition government must also lay the foundations for reversing longstanding challenges related to the management of oil wealth, limited inclusion and stagnant incomes, while advancing towards fiscal sustainability.

About the authors

Dr Julia Bello-Schünemann is a Research Consultant at AFI. Her interests include governance, demographics, urbanisation as well as socio-economic development. Between 2013 and 2016 Julia was a Senior Researcher at AFI and thereafter worked as a consultant for the ISS in Nigeria. Julia holds a Ph.D. in International Relations from the Universidad Complutense in Madrid, Spain and an MA in Communication, Political Science and Economics from Ludwig-Maximilians-University, Munich in Germany.

Dr Jakkie Cilliers is the ISS's founder and former executive director. He currently serves as chair of the ISS Board of Trustees, head of the African Futures and Innovation (AFI) programme at the Pretoria office of the Institute, and is an extraordinary professor at the University of Pretoria. His 2017 best-seller *Fate of the Nation* addresses South Africa's futures from political, economic and social perspectives. His three most recent books, *Africa First! Igniting a Growth Revolution* (March 2020), *The Future of Africa: Challenges and Opportunities* (April 2021), and *Africa Tomorrow: Pathways to Prosperity* (June 2022) take a rigorous look at the continent as a whole.

About African Futures & Innovation

Scenarios and forecasting can help Africa identify and respond to opportunities and threats. The work of the African Futures & Innovation (AFI) program at the Institute for Security Studies aims to understand and address a widening gap between indices of wellbeing in Africa and elsewhere in the world. The AFI helps stakeholders understand likely future developments. Research findings and their policy implications are widely disseminated, often in collaboration with in-country partners. Forecasting tools inspire debate and provide insights into possible trajectories that inform planning, prioritisation and effective resource allocation. Africa's future depends on today's choices and actions by governments and their non-governmental and international partners. The AFI provides empirical data that informs short- and medium-term decisions with long-term implications. The AFI enhances Africa's capacity to prepare for and respond to future challenges. The program is headed by Dr Jakkie Cilliers.
