

The Rebirth: Tunisia's potential development pathways to 2040

Purpose and scope

Jakkie Cilliers and Stellah Kwasi

Last updated 24 June 2022 using IFs v7.45

Purpose and scope

This report presents an integrated analysis of Tunisia's likely future development trajectory (or Current Path) to 2040, using the International Futures (IFs) forecasting platform. The analysis is then complemented by presenting the impact of three policy orientations that prioritise growth, sustainability and equality, and leapfrogging, respectively. The three pathways frame the choices for resource allocation and accompanying trade-offs that need to be made for the future. Underpinning all three scenarios is the need to reform governance. All monetary values in this report have been converted from 2011 US\$, used by IFs, into 2019 euro values, unless indicated otherwise.

Chart 1: Comparison groups

To create comparisons across countries and regions, we use the World Bank's classification of economies into low-income, lower middle-income, upper middle-income and high-income groups for the 2020 fiscal year. [1]

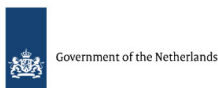

The World Bank classifies Tunisia as one of 21 lower middle-income economies in Africa. The other lower middle-income countries in North Africa are Egypt, Mauritania and Morocco. However, Tunisia straddles various identities that complicate income-based comparisons. It is part of both the African region and the Middle East and North Africa (MENA) region, and shares many characteristics with both. For this reason we tend to use the global lower middle-income group of countries for comparative purposes in addition to regions such as sub-Saharan Africa, where appropriate.

When Tunisia is compared with country groups, it is excluded from that group to maintain the accuracy of the comparison, hence the use of 'other' (e.g. 'other lower middle-income' or OLMICs). When using the upper middle-income group of countries (UMICs), we exclude China, as its large population and economy tends to skew comparisons with other income groups.

Endnotes

1. See World Bank, [New country classifications by income level: 2019–2020](#), 1 July 2019, Because the IFs system does not calculate gross national income (GNI), we use GDP per capita in purchasing power parity as a proxy.

About the authors

Dr Jakkie Cilliers is the ISS's founder and former executive director. He currently serves as chair of the ISS Board of Trustees and head of the African Futures and Innovation (AFI) programme at the Pretoria office of the Institute. His 2017 best-seller *Fate of the Nation* addresses South Africa's futures from political, economic and social perspectives. His three most recent books, *Africa First! Igniting a Growth Revolution* (March 2020), *The Future of Africa: Challenges and Opportunities* (April 2021), and *Africa Tomorrow: Pathways to Prosperity* (June 2022) take a rigorous look at the continent as a whole.

About African Futures & Innovation

Scenarios and forecasting can help Africa identify and respond to opportunities and threats. The work of the African Futures & Innovation (AFI) program at the Institute for Security Studies aims to understand and address a widening gap between indices of wellbeing in Africa and elsewhere in the world. The AFI helps stakeholders understand likely future developments. Research findings and their policy implications are widely disseminated, often in collaboration with in-country partners. Forecasting tools inspire debate and provide insights into possible trajectories that inform planning, prioritisation and effective resource allocation. Africa's future depends on today's choices and actions by governments and their non-governmental and international partners. The AFI provides empirical data that informs short- and medium-term decisions with long-term implications. The AFI enhances Africa's capacity to prepare for and respond to future challenges. The program is headed by Dr Jakkie Cilliers.
