Where to find the impact of the Demographics and Health scenario

The various geographic reports on this site present the impact of the Demographics and Health scenario, either as a single, combined scenario or as two separate scenarios for every African country and region, as well as for various groupings such as Central Africa and the Southern African Development Community (SADC).

Their combined application is being phased in over time.

Separate sections below discuss the combined impact of the Demographics and Health scenario on fertility rates, population structure, the African economy, and on global and African population forecasts.

The theme on health presents the impact of the combined Demographics and Health scenario on life expectancy and infant mortality, amongst others.

The empowerment of women and the impact of better education, both important contributors to reduced fertility rates, are included in the scenarios on governance and education.

About the authors

Dr Jakkie Cilliers is the ISS's founder and former executive director. He currently serves as chair of the ISS Board of Trustees and head of the African Futures and Innovation (AFI) programme at the Pretoria office of the Institute. His 2017 best-seller *Fate of the Nation* addresses South Africa's futures from political, economic and social perspectives. His three most recent books, *Africa First! Igniting a Growth Revolution* (March 2020), *The Future of Africa: Challenges and Opportunities* (April 2021), and *Africa Tomorrow: Pathways to Prosperity* (June 2022) take a rigorous look at the continent as a whole.

About African Futures & Innovation

Scenarios and forecasting can help Africa identify and respond to opportunities and threats. The work of the African Futures & Innovation (AFI) program at the Institute for Security Studies aims to understand and address a widening gap between indices of wellbeing in Africa and elsewhere in the world. The AFI helps stakeholders understand likely future developments. Research findings and their policy implications are widely disseminated, often in collaboration with in-country partners. Forecasting tools inspire debate and provide insights into possible trajectories that inform planning, prioritisation and effective resource allocation. Africa's future depends on today's choices and actions by governments and their non-governmental and international partners. The AFI provides empirical data that informs short- and medium-term decisions with long-term implications. The AFI enhances Africa's capacity to prepare for and respond to future challenges. The program is headed by Dr Jakkie Cilliers.
