Impact of the Demographics and Health scenario on GDP per capita

Chart 13 presents the impact of the Demographics and Health scenario on the GDP per capita compared to the Current Path forecast. In absolute terms, Mauritius gains the most by 2043, with its GDP per capita improving by US\$1 081, followed by Egypt by US\$1 047—improvements of 6% and 4% above the Current Path forecast, respectively. However, it is always more reasonable to calculate the per cent improvement, according to which Morocco, Cape Verde, Libya, Tunisia and Seychelles gain less than a 1% improvement in the GDP per capita by 2043, while Madagascar, Malawi, Lesotho and Zimbabwe all gain more than 8%.

Chart 13: The impact of the Demographics and Health scenario on GDP per capita compared to the Current Path forecast

The average improvement for Africa is US\$441 in 2043, or more than 6% above the Current Path forecast.

About the authors

Dr Jakkie Cilliers is the ISS's founder and former executive director of the ISS. He currently serves as chair of the ISS Board of Trustees and head of the African Futures and Innovation (AFI) programme at the Pretoria office of the ISS. His 2017 best-seller *Fate of the Nation* addresses South Africa's futures from political, economic and social perspectives. His three most recent books, *Africa First! Igniting a Growth Revolution* (March 2020), *The Future of Africa: Challenges and Opportunities* (April 2021), and *Africa Tomorrow: Pathways to Prosperity* (June 2022) take a rigorous look at the continent as a whole.

About African Futures & Innovation

Scenarios and forecasting can help Africa identify and respond to opportunities and threats. The work of the African Futures & Innovation (AFI) program at the Institute for Security Studies aims to understand and address a widening gap between indices of wellbeing in Africa and elsewhere in the world. The AFI helps stakeholders understand likely future developments. Research findings and their policy implications are widely disseminated, often in collaboration with in-country partners. Forecasting tools inspire debate and provide insights into possible trajectories that inform planning, prioritisation and effective resource allocation. Africa's future depends on today's choices and actions by governments and their non-governmental and international partners. The AFI provides empirical data that informs short- and medium-term decisions with long-term implications. The AFI enhances Africa's capacity to prepare for and respond to future challenges. The program is headed by Dr Jakkie Cilliers.
