Africa in the World
Conclusion: For Africa — politics for development

Jakkie Cilliers
Conclusion: For Africa — politics for development

Scenarios are not predictions. They are tools that help to frame alternative futures systematically and to enable a coherent discussion and analysis. Scenarios done using the traditional two-dimensional analysis - in this case, the extent of global fracturing versus efforts at sustainability - present four divergent alternatives that assist in the associated modelling and conceptualisation. Reality will be much more complex and typically ends up somewhere in between. Done well, however, scenarios surface structural trends and the outcomes or effects of different pathways.

Our analysis started by presenting the recent history and likely forecasts of the global distribution of material power and influence, focusing on China and the US. In line with the more detailed research done by our colleagues at the Frederick S Pardee Center for International Futures at the University of Denver, we find that a power transition that would see China overtake the US as the most powerful country in the world will likely occur before mid-century. However, a larger group of rich countries that share a commitment to individual (as opposed to collective) aspirations (democracy, individual human rights, etc.), aka the West, will continue to dominate globally and maintain a technological, wealth and power advantage even over a global axis led by Chinese and Russian concepts for subsequent decades. These divisions are, however, set to become less stark and decline in importance with the emergence of regionalism.

The emergence of China as the most powerful country globally will inevitably reshape global relations. However, it will occur in a more crowded and complex world where the ability to exercise power will likely be more constrained than in recent history. Given the combined material power of the West and China's relative international isolation (it inspires fear rather than attraction and has tense relations in its neighbourhood), this trend will eventually deliver a global order that will evolve quite differently from the so-called liberal international order even as Asia partly ‘decouples’ from the rest of the world. There are many examples of Chinese integration with the existing rules and norms such as the extent to which its actions on debt relief for Africa today are to collaborate with the international financial institutions rather than operate outside them and the steady adoption of best project standards in expanded infrastructure in Africa and elsewhere. In that future, Africa will geographically straddle a Western-dominated Atlantic to its north and west and an Indian and Pacific Ocean zone eastward, with China at its core but contested areas of influence emanating from India and others.

Several developments could disrupt this broad structural trend, namely great power implosion in China (most likely as a result of pressures towards democracy) or the US (as internal political divisions widen), or the contraction or the expansion of the EU (through, for example, readmission of the UK, the inclusion of Türkiye and a democratic Russia). Deeper regional integration in Asia, the accelerated impact of climate change, the relations between the US and the EU, and India's foreign policy orientations will likely determine the nature of the subsequent global order. Leadership and leaders matter. Because of the influence of individual leaders such as Xi Jinping, Vladimir Putin and potentially Donald Trump in shaping their countries’ domestic and foreign policies, what happens to them individually could have global ramifications.

Debates on power and influence, such as that set out above, focus on so-called ‘great powers’ or the ‘states that make the most difference,’ which does not include any African country. That is typical and occurs despite the large populations of a country such as Nigeria, which, by 2043, would have a population close to 400 million people, making it the third most populous country globally. On its current development trajectory, 145 million Nigerians will still live in extreme poverty. In the Sustainable World, Nigeria would have only 86 million extremely poor people - 22% instead of 37% of its population. Historically, a combination of population growth, slow employment growth and relative deprivation translate into more rapid outward migration, and it will be no different this time. Migration from Africa is set to increase, and it will have significant economic and sometimes political effects, particularly in Europe. Africans will bring their enormous enterprising, creative, and connectivity assets, which are already evident in the world of music, the arts, film, and literature, as well as in the realm of sport. Therefore, the first effects will likely be cultural, then economic, and ultimately also political. The Old World is ageing, and its demand for lower-skilled labour, which Africa has a large surplus, is increasing. If job opportunities exist, labour will follow, and it will be hard to stop.
Even as no African country emerges as a significant global power, the distribution of power in the 21st century does make the bed in which African states sleep. The issue for Africa is if that bed facilitates more rapid development. For developed countries, the question is whether global stability is possible given the significant wealth, income, health, and education disparities between Africa and neighbouring regions such as Europe, the Middle East, and Asia.

Against this background, Africa’s leaders must be aware of the limited space for the continent’s development and the uphill battle to realise a Sustainable World scenario. Africa needs geopolitical stability that allows for economic growth and human development. For example, rather than the all-consuming preoccupation by the West with the war in Ukraine, Africans are seized with the second-order economic effect of the war and the impact it has on driving up global food and fuel prices. African responses to the war reflect a widening divide between the West and the Global South, recently accelerated by events in Gaza.

Africa’s foreign policy and development efforts should unequivocally support the policies and approaches that would advance the Sustainable ‘best of world’ objective through greater convergence and more robust, more effective continental institutions, which support and sustain Africa’s aspirations and values as enshrined in Agenda 2063. There is considerable scope in this regard by, for example, upgrading the African Governance Platform into a binding legal protocol similar to that of the Peace and Security Council (PSC) and then holding leaders to account, rationalising the plethora of AU-related institutions that litter the continent but provide little or no added value (such as a toothless Pan-African Parliament), strengthening the relationship between the PSC and the A3 - the acronym for the three African countries that serve on the UN Security Council, etc. Then there are a host of practical measures, such as a lack of progress in implementing the Yamoussoukro Decision on open skies to deregulate air services entirely within the domestic domain of African governments that had made limited progress since 1999, when it was adopted. Most important is the movement towards ever larger integrated free trade regions in Africa that have the most significant development potential for Africa over long-term horizons. Given the political will, many practical measures can be implemented to reduce non-tariff constraints on cross-border trade.

The priority for African leadership is to focus laser-like on every obstacle to maximise its sustainable development prospects. That includes a next-generation rules-based global system that will facilitate poverty reduction, economic growth, stability and investment in the Global South. Africa needs to awaken to the importance of advocating for a reformed rules-based system that serves its development interests and needs to presents specific proposals in this regard or at least take a more activist role.

Largely a Western creation, in its current form, the rules-based order constrained armed conflict between major powers during the Cold War era. However, that containment resulted in several proxy wars in Africa and elsewhere. It has not facilitated Africa’s development since it is primarily premised on maintaining a global structure that skews developmental advantages to the already rich. It allowed the developed world to spew such amounts of carbon into the atmosphere that it now constrains a similar development pathway for others, even as China is now the most significant global emitter of greenhouse gases by a large margin. For all the progress that globalisation has unlocked, such as through trade and knowledge transfers, the current international system embeds privilege through profit shifting and a global tax regime that does not enforce tax obligations where profits are generated. A world with five permanent seats and a veto within the UN Security Council is regularly touted as the most glaring example of the vast global ramifications, even if the declining authority of the Council would make current proposals on reform more symbolic than substantive.

AU member states need to focus on the pursuit of a facilitating environment for more rapid growth and poverty alleviation, even as the commitment to national development by ruling elites is absent in Equatorial Guinea, South Sudan, Eswatini and others in addition to a clutch of Francophone countries that have recently fallen victim to military takeovers. Since the achievement of the Agenda 2063 vision is shared amongst only some African leaders, it is up to critical African states to decide if they are willing to embark upon a two-track approach where some countries commit earlier to higher standards of governance than others. Many attempts have been made to achieve this, such as the Conference on Security,
Stability, Development and Cooperation in Africa (CSSDCA), NEPAD and the African Peer Review Mechanism (APRM), pointing to the many hurdles to such a strategy. The differentiated approach in implementing the African Continental Free Trade Area goes in this direction, but much more is required. For example, countries in the Sahel are currently not viable partners in regional integration or even many matters relating to better governance. Taking this forward will require a different approach to one that seeks to herd every African country towards a common goal.

Meanwhile, the current trajectory towards a Divided World places a cap on Africa’s development potential. Compared to the Sustainable World, GDP per capita in Africa will be 24% lower (US$6 193 vs US$8 094), and extreme poverty in Africa will be 69% higher (562 vs 332 million), reflected in Chart 16.

Chart 16: Comparing scenario impact on economic size, GDP PC and extreme poverty

Hastening this trend, the war in Ukraine and the fear of China’s rising influence have significant collateral damage effects. The West needs to make a sharp differentiation between China and Russia and resist simplistic narratives that pit a benevolent West against bad China associated with evil Russia in Africa. While the US and China are both increasingly embracing the idea of a bipolar struggle, Africans need to work for a multipolar world where they are not in the pocket of any great power.

There is, simply put, no strategic profit to be gained by the ongoing demonisation of China in the US and Europe and vice versa. The Chinese Communist Party will not abandon its collectivist views on politics and development as much as democratic countries will not abandon a belief in individual freedoms and political rights. Nor can the West constrain China’s momentum towards great power status. What is needed is a determined effort to rebuild relations between the West and China to one of mutual respect and acknowledgement of the differences in approaches to development and governance.
Africa can continue to seek profit from playing the West off against China as it has in the past, which is likely the default position on the current global trajectory towards a Divided World. Such an opportunistic approach has clear limitations, however. What ultimately matters is what Africans decide and do themselves daily. In contributing to Africa Tomorrow, Cobus van Staden cogently argues that this is more urgent concerning China, which presents the most significant opportunities.

‘Bluntly put,’ he writes, ‘if Africa wants positive outcomes from China, it needs to be more hard-nosed, more prepared, more ruthless than the Chinese. This means coming to the negotiating table with the same international legal teams as Chinese contractors, being similarly uncompromising in contract language, being willing to walk away from deals if they do not serve inclusive development goals and cracking down hard on any labour or environmental abuses by foreign companies. ... It means withdrawing African buy-in from geopolitical “New Cold War” narratives and indulging these powers to the extent they serve African purposes.’ Africa should similarly not commit to foreign policy support on specific matters where its interests are not directly at stake.

The time for unreasonable confidentiality clauses and political conditionality is past. Choosing to side with China, Russia, the US or Europe on matters not directly concerned with Africa or playing the one-off against the other serves no purpose.

Developmentally minded African governments should commit to a minimum set of project transparency and implementation requirements (such as public consultation and environmental standards) that apply across the board for all companies and countries that invest in the participating African countries. The requirements should be clear, simple, and public, with all subsequent agreements disclosed, available upon request, and bolstered in a binding legal protocol followed by domestic enactment and implementation.

It is self-evident that coordinated positions among Africa’s leading countries on critical matters such as foreign investment, particularly in the mining sector, regarding beneficiation and transparency would maximise the ability to shape the international rules to the advantage of the participating countries. Strengthening Africa’s investment and financing models, with outside support where appropriate, would boost the continent’s fortunes. To facilitate investment into Africa, critical countries with the proper governance institutions and regulatory standards could set themselves up as investment routes to facilitate inward capital flows - a role that Hong Kong played in respect of China for many years.

Looking to the West, what Africa needs is for Western governments to find ways to de-risk investment by its banks and the private sector in the continent. Ultimately, low investments are driven by colonial-era hangovers and negative perceptions that have been deeply ingrained in a Western world that has provided a drip-feed of aid to Africa since the 1960s. Europeans and Americans regularly berate Africans for their lack of development in return for this payment, much of which was to buy loyalty during the Cold War, without sufficient recognition that the amounts and modalities are insufficient to change fundamentals such as Africa’s poor human capital endowment that could unlock more rapid growth.

Instead, most Africans see aid as a nominal tax paid for past injustices and an international system skewed against the continent’s development. Western rating agencies play a significant role in this regard. They have, for decades, adopted a punitive approach to investment in Africa compared to other regions, driven by the private sector’s demand for a secure investment and a lack of knowledge of the continent based on the adverse reporting from a sprinkling of Western news reporters located in Nairobi or Cape Town. Changing these perceptions requires ongoing engagement, communication and much greater visibility of Africa’s development efforts in Europe and North America. It requires massive student exchange programmes, regular trade fairs and political dialogue — not only visits when gas from Russia runs dry or to counter China’s growing influence in Africa.

Much more important for Africa than aid is a reset in the relations between the West and China. The trajectory towards a Divided World will likely accelerate the continent’s ongoing and emergent challenges. It is evident in the extent to which
Moscow has already been able to leverage its limited assets in producing fertiliser, wheat, energy, arms, and military cooperation to pursue an anti-Western agenda in Africa to the detriment of stability and development. Africans need to take political and diplomatic action to avoid further collateral damage.

China, Europe, and the US are Africa's most important development partners, even as the continent's trade with other countries in the Global South is increasing. Africa desperately needs Chinese loans, investment and domestic manufacturing contributions, and what the US and the EU can offer under their various initiatives, such as the US's Build Back Better World, the EU's Global Gateway, and the G7's Partnership for Global Infrastructure and Investment. Chinese companies have already built 60% of World Bank projects, and the West does not have the tools to replace that supply; it has many other offerings, including technology, investment standards, data protection standards, and expertise in project management. Above all, the West sits atop a dam of potential investment monies that could improve Africa's prospects, given a more reasonable risk and investment framework.

Beyond Africa's development needs, the accelerated impact of climate change will, almost inevitably, require an entirely different mindset and approach to the current trend towards a political economy of division. Separate themes on climate change and energy provide significant additional context and interpretation. They forecast Africa's likely energy transition and the Current Path forecast of carbon emissions, and the impact of various sectoral scenarios on carbon emissions ranging from an agricultural revolution to a manufacturing transition. Inevitably, those economic transitions with the highest growth content, such as implementing the African Continental Free Trade Agreement, result in the most significant increase in greenhouse gas emissions. Although emissions per capita in Africa are very low, the rapid growth in the continent's population, on top of the expansion of electricity access and greater energy intensity as incomes rise, points to a continent that, by 2065, will emit more carbon from fossil fuels than China. As Africa is not responsible for climate change, what happens in Africa will determine global climate futures.

Amongst others, Africa needs to have a severe bout of introspection about population growth if it is to grow economically more rapidly, improve the prospects for its young population, and curb greenhouse gas emissions in its own and global interests. The theme on demographics explains that rapid population growth in Africa is a drag on development, given the low ratio of working-age persons to dependents. Eventually, only much deeper economic and political integration complemented by much more rapid and sustained economic growth in Africa could offset the continent's limited role in shaping global orientations - but that needs to occur sustainably.

How do global players construct a collaborative rather than competitive global system that will enable humanity to survive and prosper in the long term, particularly in Africa? The elements are well established. Most recently, they were reiterated in the UN Secretary-General's briefing to the General Assembly on Priorities for 2023. 'The world', Antonio Guterres warned, 'is staring down the barrel of a confluence of challenges unlike any others in our lifetime. … This is not a time for tinkering. It is a time for transformation.' Many elements of an appropriate reform agenda are reflected in the September 2021 report by UN Secretary-General 'Our Common Agenda', but instead of action, Guterres warned, 'the chances of further escalation and bloodshed keep growing.' Amongst a host of priorities for urgent action, he lists an agenda for the radical transformation of the global financial architecture to place the needs of developing countries at the centre of every decision and mechanism of that system.

Ahead of the 2024 UN Summit and its Pact for the Future, the required reforms of the international financial and tax architecture were set out in a May 2023 UN policy brief in six areas ranging from global economic governance to a reformed global tax architecture. Collectively, these would end the divergence, economic fragmentation and geopolitical fractures, rebuild trust and support convergence towards effective global financial governance and attract more significant flows of private capital to invest in the capacity of developing countries to alleviate poverty and suffering.

In summary, our analysis predicts a power transition with China potentially surpassing the US before mid-century, although a Western alliance led by democratic values is expected to maintain a significant advantage. This evolving global
order, away from a liberal international order, will see regionalism rise, with China integrating into global governance standards despite its international isolation. Disruptions could arise from internal political turmoil in great powers like the US and China, the EU's fluctuation, or deeper Asian regional integration. Climate change emerges as a critical global challenge, requiring cooperative responses. Artificial Intelligence (AI) poses risks and opportunities, depending on its management across different global scenarios.

Africa, despite its diversity and challenges, will not emerge as a significant global power but will be profoundly affected by these global trends. The continent's development, heavily influenced by external relations, will require navigating a complex international landscape marked by the West's dynamics with China and Russia. Africa's growth and human development hinge on global stability and cooperative governance, emphasizing the need for a reformed global order that addresses the disparities between Africa and other regions. The continent's response to climate change, population growth, and the pursuit of sustainable development amidst global divisions will be crucial. Ultimately, the global community's ability to construct a collaborative system, as outlined in various UN agendas, will determine Africa's and humanity's long-term prosperity.

Chart 17: Recommendations

<table>
<thead>
<tr>
<th>Africa must</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Africa needs geopolitical stability. End to US-China rivalry. No instrumentalist</td>
</tr>
<tr>
<td>2. Relentlessly pursue development interests:</td>
</tr>
<tr>
<td>a. Conditions for FDI, knowledge transfers and domestic linkages</td>
</tr>
<tr>
<td>b. Full transparency on all government contracts, loans to state and SOE's etc. No hidden debt. Non-reciprocal tax information exchange mechanisms</td>
</tr>
<tr>
<td>3. Effective continental institutions for development:</td>
</tr>
<tr>
<td>a. Legally binding protocol on good governance</td>
</tr>
<tr>
<td>b. Continental technical standards, e.g. railways</td>
</tr>
<tr>
<td>4. Two-track approach to trade integration and better governance?</td>
</tr>
<tr>
<td>5. Financial and trade architecture fit for 21st century:</td>
</tr>
<tr>
<td>a. Reduced cost of sovereign borrowing and debt relief</td>
</tr>
<tr>
<td>b. More democratic and representative decision-making in IFs</td>
</tr>
<tr>
<td>c. Massively scale-up development and climate financing, including from private finance</td>
</tr>
<tr>
<td>d. Global tax reform</td>
</tr>
